

Operator's Breathing Filter

Efficient and versatile air purifying unit for air-fed helmets that can be either free-standing or mounted.

Filters odours, oil mist, moisture and large particles.

Replaceable filter cartridges

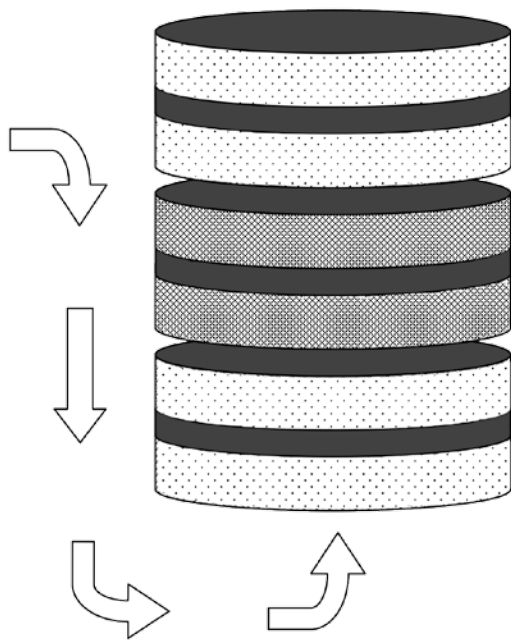

The Operator's Breathing Filter (OBF) is a particle filter which has been designed to improve the quality of air being supplied to air-fed helmets.

Can be mounted on a wall!

The OBF is easily adjustable and comes complete with removable mounting brackets.

Respiratory felt at final stage acts as final filter removing particles up to 0.5 microns

Activated charcoal removes odours

Activated alumina removes oil, mist & moisture

The OBF removes:

Odours
Oil mist
Particles
(0.5 microns or larger)

Please note:
The OBF does not filter carbon monoxide.

Please note:
The effectiveness and life-span of the filter cartridge will be considerably reduced if the supplied air is heavily contaminated.
